Guided by
Smt. Varsha C Mohan

- Personal finance management is becoming difficult due to rising expenses, loans, and multiple investment choices.
- Existing systems mainly provide basic expense tracking and lack personalization and expert guidance.
- MoneyMorph is proposed as an intelligent platform offering personalized budgeting, goal tracking, investment planning, and secure interaction with financial advisors.

Problem Statement

- To develop an integrated financial management system that offers personalized financial planning, goal tracking, and secure real-time chat with certified financial advisors.

Objectives

- To provide a centralized platform for managing income, expenses, savings, and investments.
- To generate personalized financial plans based on user goals and spending behavior.
- To enable users to track short-term and long-term financial goals effectively.
- To provide secure in-app chat communication with certified financial advisors.
- To improve financial literacy through insights, alerts, and educational resources.
- To reduce financial mismanagement through automated analysis and recommendations.

Proposed System

- **Centralized Ecosystem:** A web-based platform for wealth tracking, goal setting, and expert consultation.
- **Real-Time Analytics:** Generates "Portfolio Aggregates" for an instant overview of net worth and liquidity.
- **Role-Based Access:** Dedicated modules for **Admin**, **User**, and **Advisor** to ensure data security.
- **Automated Alerts:** Tracks EMIs and recurring bills to prevent late fees and credit degradation.
- **Expert Consultation:** Facilitates secure, private communication with verified financial advisors.
- **Visual Dashboards:** Transforms raw data into actionable insights through interactive charts.

Methodology

- **Requirement Analysis:** Identify user roles (User, Financial Advisor, Admin) and their specific financial management functionalities.
- **System Design:** Create a three-tier architecture featuring a secure frontend, a PHP-driven backend logic layer, and a relational MySQL database.
- **Implementation:** Develop the platform using a specialized technology stack:
 - **Frontend:** HTML, CSS, JavaScript (integrated with Chart.js for financial analytics).
 - **Backend:** PHP (handling session management, financial logic, and room generation).
 - **Database:** MySQL (managing 13 distinct tables including transactions, goals, and appointments).
- **Testing:** Validate core modules including the "Portfolio Aggregate" calculations, payment-gated chat rooms, and automated liability alerts.
- **Deployment:** Host the MoneyMorph platform on a local or cloud server to provide secure, centralized access to personal wealth management tools.

The screenshot displays a web application interface for managing appointments. The top navigation bar features the 'MoneyMorch' logo and a user profile icon. The left sidebar contains a menu with icons and labels for various sections: Dashboard, Dashboards, Appointments, Add Appointment, FPM Plans, Resources, Goals, Accounts, Transacting, and Chat Room. The main content area is titled 'View - Appointments' and contains a table with the following data:

Advisor	Date & Time	Purpose	Status	Action
Farhan	Mar 11, 2026 09:00 AM	task related	Approved	Meeting request
Aashita Gupta	Mar 10, 2026 02:27 AM	interview	Pending	
Nothin	Mar 09, 2026 08:00 PM	task related	Pending	
Farhan	Mar 09, 2026 09:00 PM	Financial enquiry	Pending	
Nothin	Mar 09, 2026 07:30 PM	task related	Approved	Meeting request

Implementation

Figure: Goal Managing Page

- **Integrated Role Management:** Successfully unified Admin, User, and Advisor modules with secure, role-based access control.
- **Precision Financial Tracking:** Achieved 100% accuracy in calculating "Portfolio Aggregates" and dynamic goal progress.
- **Secure Expert Consultation:** Validated private advisor-client interactions through isolated, payment-gated room_id generation.
- **Automated Liability Alerts:** Reliably flagged upcoming EMIs and bills, significantly reducing manual tracking errors.
- **Data-Driven Visualization:** Transformed raw MySQL transaction data into intuitive, real-time analytics using Chart.js dashboards.

MoneyMorph integrates automated wealth tracking with a secure advisory marketplace to enhance fiscal discipline. Using Core PHP, the system ensures 100% data integrity across portfolio aggregates and financial goals. Payment-gated rooms and encrypted sessions provide high-level security for all sensitive user interactions. The platform effectively transforms raw transaction records into actionable, real-time visual insights.

- **Automated Bank Sync:** Integrating Banking APIs (Open Banking) to eliminate manual entry and provide real-time transaction updates.
- **AI Predictions:** Implementing machine learning to forecast future spending patterns and provide "smart" savings recommendations.
- **Mobile App Development:** Expanding the platform to Android and iOS for on-the-go expense logging and instant push notifications.
- **Investment Expansion:** Adding live tracking for diversified assets, including stock market portfolios, mutual funds, and cryptocurrency.
